

16 WEEKS

PANDA's Program

Eat more. Build the body — don't shrink it.

MADE FOR

Panda

From your man, who loves you.

MADRID

59 KG → 55 KG · 16 WEEKS

TWO MINUTES, THEN YOU'RE READY

How this works

There are no recipes in here, on purpose — you cook better than any recipe I could write. What you get instead is **the ingredients, the amounts, and the structure**. You choose the rest.

1

Build the plate

Every meal is: **one protein + one carb + vegetables + one fat + as much flavour as you like**. Pages 6–8 give you the lists and the exact amounts. Then cook it your way.

2

Never skip

Breakfast, lunch, dinner, every day. Breakfast is assembled in two minutes with **zero cooking**. Nothing savoury to carry to class — a fruit or a protein drink at 10:00, that's all.

3

Three Pilates + walk

Three classes a week, heavy springs, glute-focused. Ten thousand steps on three days, six to eight on the rest. The week is planned for you on page 10.

WHAT'S IN HERE

Why you're stuck	3	Shopping list	9
Your numbers	4	Your week	10
The cheat sheet	5	Glutes & legs	11
Breakfast & snacks	6	Supplements & health	12
Lunch	7	The 16 weeks	13
Dinner	8	Your tracker	14
		On the bad days	15

START TOMORROW, NOT MONDAY

Day 1: eat breakfast. Just that. Page 6, pick a base, pick a topping, two minutes. Everything else stays exactly as it is today.

Day 2: breakfast again, plus one shop — page 9.

Day 3: breakfast, a fruit at 10:00, and build your first lunch from page 7. That's it. You're running the whole program by day three.

You don't have to be perfect. You have to be *consistent-ish*.

Five good days out of seven, for sixteen weeks, changes your body completely. Nine perfect days followed by quitting changes nothing. The plan already has the slack built into it.

READ THIS PAGE TWICE

None of this is your fault

No energy. No weight coming off. Losing muscle. Those aren't three problems — they're one, and it's the opposite of what you've been blaming yourself for.

You are not eating too much. You're eating *far too little*, and almost no protein.

WHAT YOUR BODY DID

Months of too little food and a body doesn't burn fat faster — it protects itself. It turns the thermostat down: less heat, less movement, slower digestion, foggy head, cold hands, flat mood.

And it still needs protein every day for skin, hair, hormones and immune cells. If you don't eat any, it takes it from the only store you have — **your muscle.**

WHY THE SCALE STOPPED

A body burning less needs less. Your maintenance dropped until it met the tiny amount you were eating. That's the stall — and it's why eating even less has stopped working and never will again.

Muscle is also what burns calories at rest. Every kilo you lost made it harder. **The way out isn't less food. It's more, and better built.**

Three things to know before you start

- 1 You'll eat more than you have in a year.**
1,800 in week 1, 1,700 in week 2, then 1,600 from week 3 to the end. That is not a lot — it's normal. It only feels enormous because you've been living on half of it.
- 2 The scale may go *up* in the first two weeks.**
Half a kilo to a kilo. It's water, glycogen and food in your gut refilling. At these calories it is physically impossible for it to be fat. Don't panic, don't cut.
- 3 Nothing is forbidden.**
Bread, rice, pasta, potatoes, olive oil, merguez, dates, dark chocolate — all in the plan. The only things missing from how you eat were **quantity** and **protein**.

THE WHOLE PLAN, IN ONE SENTENCE

Eat three real meals, put protein in every one, walk, and train your legs hard three times a week — and your body will finally let go of fat instead of muscle, because for the first time it can afford to.

THE HONEST ANSWER ABOUT SPEED

Two months or four?

Both get you to roughly 55 kg — and they do *not* give you the same body.

	8 WEEKS	16 WEEKS · RECOMMENDED	
Daily food	≈ 1,400 kcal	≈ 1,600 kcal	One is hunger. One is dinner.
Fat lost	≈ 3.5 kg	≈ 5 kg	The number that actually matters.
Muscle	−1 kg	+1.5 to 2 kg	Legs and glutes, mostly.
Scale at the end	55 kg	55.5–56 kg	Slightly higher. Looks far better.
Energy	Gone by week 3	Back by week 3	You already know the first one.
Glutes & legs	Flatter	Visibly fuller	You cannot build on 1,400 kcal.
Six months later	Back to 59	Still 55	Muscle is what holds the result.

16 weeks is the drastic version.

Five kilos of fat off and two kilos of muscle onto your legs and glutes is a far bigger change than four kilos of anything falling off — and it's the only route where the result is still there next summer.

WHAT YOUR BODY BURNS

At rest	≈ 1,330 kcal
+ daily living & steps	≈ +480
+ Pilates × 3	≈ +140
Maintenance	≈ 1,950

Eating 1,000–1,200 a day, as you have been, leaves you around **800 kcal short every day**. That's the whole story.

WHAT YOU'LL EAT

Week 1 · landing week	1,800 kcal
Week 2 · step down	1,700 kcal
Weeks 3 → 16 · never changes again	1,600 kcal

130 g of protein every single day, all three weeks and all sixteen — 2.2 g per kilo. It's the number that decides whether the weight you lose comes off your fat or your glutes. Fat 50 g, carbs 160 g.

EXACTLY HOW TO DO 1,800 → 1,700 → 1,600

Build every plate as pages 6, 7 and 8 describe. **Only three amounts change**, and only in the first two weeks. The protein never changes: 130 g, every day, all sixteen weeks.

WHAT CHANGES	WEEK 1 · 1,800	WEEK 2 · 1,700	WEEKS 3 → 16 · 1,600
Lunch carb cooked	200 g	175 g	150 g
Lunch fat	2 portions	2 portions	1 portion
Dinner carb	120 g	70 g	70 g, or skip
Everything else	exactly as printed on pages 6, 7 and 8 — protein, breakfast, both snacks, vegetables		

SCREENSHOT THIS · MAKE IT YOUR LOCK SCREEN

The whole thing, on one page

YOUR DAY

06:15 **Breakfast** · assembled, never cooked

35 G

10:00 **A fruit** · or a protein drink

13:15 **Lunch** · the big plate

42 G

17:30 **Snack** · fruit, yogurt or chocolate

10 G

20:15 **Dinner** · lighter plate, no carb needed

35 G

22:30 **Lights out** · 7.5 hours

EVERY DAY, NO MATTER WHAT

- ✓ **3 meals** — never skip one
- ✓ **130 g protein** — the one number that matters
- ✓ **2 litres of water**
- ✓ **6–10,000 steps**
- ✓ **7.5 hours of sleep**

THREE TIMES A WEEK

Pilates, 60 minutes, heavy springs. Legs and glutes first, 8–12 slow reps, the last three genuinely hard. Never fasted. Protein within two hours.

EVERY PLATE, EVERY TIME

1 protein + 1 carb + vegetables + 1 fat + all the flavour you want. Lunch gets the full carb. Dinner gets half, or none. That's the entire system.

IF THE DAY FALLS APART

Tin of tuna, tin of chickpeas, olive oil, lemon. Four minutes, 40 g of protein. Keep all four in the flat, always.

IF YOU OVERATE

Eat the next meal normally. Never skip to compensate. One meal cannot undo a week — three days of under-eating can.

IF THE SCALE WENT UP

It's water. Weigh again in three days. Real fat gain needs 7,700 extra calories.

You don't need motivation today. You need breakfast.

Motivation follows action, never the other way round. Do the small thing first and the wanting turns up afterwards.

TWO MINUTES · NO PAN, NO HEAT, EVER

Breakfast

Nothing here is cooked. Open the fridge, put four things in a bowl, eat. **One from each row** — every combination lands on the same numbers.

1 BASE pick one	Greek yogurt 2 % 250 g	Skyr 200 g	Cottage cheese 200 g
	Whey + milk 1 scoop + 250 ml		
	...then stir ½ scoop of whey into the first three. That's what takes breakfast from 22 g to 35 g — don't skip it.		
2 CARB pick one	Oats, raw, stirred in 30 g	Granola 30 g	Rye bread 1 slice
	Banana 1		
3 FRUIT pick one	Berries 100 g	Apple, pear or orange 1	Kiwi 2
	Dates 2		
4 FAT pick one	Almonds, walnuts or pistachios 15 g	Tahini 1 tsp	Peanut butter 1 tsp
FREE as much as you like	Cinnamon · vanilla · rose water · 1 tsp honey · cocoa. Coffee after the food, never before — coffee on an empty stomach is half the reason you can't face eating in the morning.		

≈ 420 KCAL · 35 G PROTEIN · 2 MINUTES

Whichever four things you picked. **Not hungry?** Start with the shake — it asks nothing of your appetite, and real morning hunger comes back within two weeks. **Running late?** Whey and milk in a shaker, banana in your hand: ninety seconds.

The two snacks

10:00 · at uni

NOTHING TO CARRY

One fruit — banana, apple, orange, pear. In your bag, no container, no fork. **Or a protein drink:** a ready-made bottle, or whey in a shaker (powder in the night before, water at uni).

On Pilates days, make it the drink. Nothing savoury, nothing to prepare, nothing that smells in a lecture hall.

FREE, ANY TIME

Water · sparkling water with lemon · mint, green and herbal tea · black coffee · cucumber, tomato, radish, celery, lettuce, peppers · lemon, garlic, herbs, every spice you own. Hungry between meals and it isn't snack time? Start here.

17:30 · at home

≈ 150 KCAL

Pick one. This is what stops dinner turning into a raid on the kitchen.

- A fruit + **10 almonds**
- **150 g** Greek yogurt, cinnamon, 1 tsp honey
- **20 g** dark chocolate 70 % — with mint tea, sitting down
- A protein drink, on Pilates days
- **20 g** popcorn with paprika and salt

13:15 · THE BIG PLATE · YOU DECIDE HOW TO COOK IT

Build your lunch

One from each row, then cook it however you like. **The amounts are the plan. The cooking is yours.**

1 PROTEIN pick one · ≈ 40 g	Chicken breast or thigh 180 g	Beef mince 5 % 200 g	Lamb, lean 190 g
	Salmon 190 g	White fish 220 g	Turkey 180 g
	Eggs + feta 4 + 40 g	Halloumi 140 g	Lentils or chickpeas, cooked 350 g
2 CARB cooked weight	Rice 150 g	Bulgur, freekeh or couscous 150 g	Pasta 55 g dry
	Potatoes 250 g	Bread or pita 70 g	
3 VEGETABLES no limit	Tomato · cucumber · pepper · onion · courgette · aubergine · green beans · spinach · lettuce · radish · carrot · cabbage · mushroom · cauliflower. Never measure these. The more volume on the plate, the easier every single day of this gets.		
4 FAT measure it	Olive oil 1 tbsp	Tahini 1 tbsp	Avocado ½
	Nuts 20 g		
	Only one, and use a spoon — oil poured by eye is the easiest 200 kcal in any kitchen.		
∞ FLAVOUR free, always	Harissa · tabil · baharat · ras el hanout · za'atar · sumac · cumin · paprika · Aleppo pepper · garlic · onion · lemon · vinegar · tomato purée · mustard · parsley, mint, coriander, dill · pomegranate molasses. Season it properly. Bland food is food you'll abandon.		

≈ 600 KCAL · 42 G PROTEIN

Whatever you picked, however you cooked it. **Weeks 1 and 2 are slightly bigger** — the three exact amounts are on page 4. From week 3, these numbers never change again.

IF YOU WANT IDEAS RATHER THAN DECISIONS

One line each. All of them are just the rows above, cooked your way.

- | | |
|---|---|
| ● Chicken + rice + salad, baharat & tahini-lemon | ● Merguez or kefta + bulgur + cucumber-yogurt |
| ● Ojja: eggs, peppers, tomato, harissa + bread | ● Salmon + potatoes + green beans, garlic & coriander |
| ● Lablabi: chickpeas, cumin, harissa, eggs, bread | ● Tuna fattoush + chickpeas + toasted pita (no cooking) |
| ● Chicken pasta, tomato & harissa | ● Halloumi + lentils + tomato salad |
| ● White fish + couscous + roasted vegetables | ● Lamb + freekeh + aubergine, ras el hanout |

NEVER BORED, EVER

Same chicken, four completely different meals: **baharat + yogurt + lemon** is shawarma · **harissa + tomato + garlic** is Tunisian · **sumac + onion + olive oil** is musakhan · **ras el hanout + preserved lemon** is a tagine. Change one jar, not the shopping list.

20:15 · LIGHTER · 15 MINUTES AT MOST

Build your dinner

Same system, smaller plate, same free flavour list as lunch. The protein stays high — that part is never negotiable — and the carb becomes optional.

1 PROTEIN pick one · ≈ 35 g	Chicken 150 g White fish 190 g Salmon 150 g Beef mince 5 % 160 g Tinned tuna 1½ tins Eggs + cheese 3 + 30 g Labneh or Greek yogurt + eggs 200 g + 2 Halloumi 120 g Lentils, cooked 300 g Smoked salmon + cottage cheese 80 g + 150 g
2 VEGETABLES no limit	Raw, roasted, stewed or in a soup — whatever you feel like. A big salad, green beans in tomato, roasted peppers and aubergine, spinach, a vegetable soup. This is what makes a small dinner feel like a meal.
3 CARB optional	Rice or bulgur 70 g Small pita 40 g Potato 150 g Lentils or orzo in a soup 40 g dry Skip it on days lunch was big, or you ate out. Keep it if you trained.
4 FAT half of lunch	Olive oil 1 tsp Tahini 1 tsp Feta 25 g Nuts 10 g

≈ 400 KCAL · 35 G PROTEIN

Light, warm and never skipped. Dinner is the small meal not because eating at night is fattening — it isn't — but because your appetite is biggest at 13:00, and a lighter evening is what makes you wake up hungry enough to eat breakfast.

IDEAS, IF YOU DON'T WANT TO THINK

- Chorba: chicken or lamb, tomato, frik or orzo, lemon
- Red lentil soup + 2 boiled eggs on the side
- Grilled chicken over fattoush, sumac & lemon
- Smoked salmon + cottage cheese + cucumber & dill
- Labneh mezze plate + boiled eggs + olives (no cooking)
- Omelette with spinach & feta + a huge salad
- White fish + green beans stewed in tomato & garlic

STILL HUNGRY AFTER DINNER?

Drink 300 ml of water, wait ten minutes. Still hungry? Then eat — a yogurt, fruit, more salad, another egg. Real hunger after a 1,600 kcal day is information, not weakness: it usually means lunch was too small. Fix it tomorrow instead of going to bed hungry tonight.

EATING OUT, OR SOMEONE COOKED FOR YOU

Take a normal plate, go to the protein first, one round of bread rather than three, no automatic second helping. Then make the next meal a light one. Family cooking was never the problem — eating nothing at all was. *Shawarma as a plato, not a durum, is 45 g of protein and a perfectly good lunch.*

ONE BIG SHOP SUNDAY · ONE TOP-UP WEDNESDAY

The shopping list

Screenshot this. Spanish names in *italics* so you can point at a shelf instead of reading every label. Around **€60–75 a week** for everything.

PROTEIN — THE PRIORITY

- ☐ Chicken breast & thigh, 1.2 kg *pollo* — halal butcher
- ☐ Beef mince 5 %, 600 g *carne picada 5 %*
- ☐ Merguez or halal sausage × 1
- ☐ Salmon × 2 *salmón*
- ☐ White fish × 3 *merluza / bacalao*
- ☐ Tinned tuna × 8 *atún en aceite de oliva*
- ☐ Eggs × 24 *huevos*
- ☐ Smoked salmon × 1 *salmón ahumado*
- ☐ Halloumi × 1 *queso para freír*

DAIRY

- ☐ Greek yogurt 2 %, 2 kg *yogur griego natural*
- ☐ Skyr × 4 *Skyr*
- ☐ Cottage cheese × 3 *queso fresco batido 0 %*
- ☐ Feta *queso feta*
- ☐ Labneh, or strain yogurt overnight
- ☐ Semi-skimmed milk, 2 L *leche semidesnatada*

CARBS & CUPBOARD

- ☐ Rice *arroz basmati*
- ☐ Bulgur / freekeh / couscous
- ☐ Wholewheat pasta *pasta integral*
- ☐ Potatoes *patatas*
- ☐ Pita & rye bread — freeze half
- ☐ Oats, 1 kg *copos de avena*
- ☐ Granola
- ☐ Tinned chickpeas × 4 *garbanzos cocidos*
- ☐ Cooked lentils × 3 *lentejas cocidas*
- ☐ Red lentils *lentejas rojas*
- ☐ Crushed tomato × 5 *tomate triturado*
- ☐ Tomato purée *concentrado de tomate*

FATS & EXTRAS

- ☐ Extra virgin olive oil *aceite de oliva virgen extra*
- ☐ Tahini *tahina*
- ☐ Almonds, walnuts, pistachios *crudos, sin sal*
- ☐ Peanut butter, 100 % peanuts
- ☐ Dark chocolate 70–85 %
- ☐ Dates, honey *dátiles, miel*
- ☐ Olives, capers, popcorn kernels

FRESH — TWICE A WEEK

- ☐ Tomatoes, 1.5 kg
- ☐ Cucumbers × 5 *pepinos*
- ☐ Onions & red onions
- ☐ Garlic × 2 heads *ajo*
- ☐ Lemons × 10 — you'll use them all
- ☐ Peppers, courgette, aubergine
- ☐ Green beans *judías verdes*
- ☐ Romaine, radish, spring onion, carrot
- ☐ Spinach *espinacas*
- ☐ Parsley, mint, coriander, dill
- ☐ Bananas, apples, oranges, pears
- ☐ Frozen berries *frutos rojos congelados*

ONCE, THEN IT LASTS MONTHS

- ☐ Harissa · tabil · baharat · ras el hanout
- ☐ Za'atar · sumac · Aleppo pepper
- ☐ Cumin · paprika · cinnamon · turmeric
- ☐ Pomegranate molasses · dried mint
- ☐ Whey protein, 1 kg
- ☐ Vitamin D3

WHERE, IN MADRID

Halal meat and every spice: **Lavapiés** (Calle del Oso, Embajadores) or **Tetuán** (Bravo Murillo). Everything else: Mercadona or Lidl. Carrefour and Alcampo have halal sections in the bigger stores.

TWO HABITS WORTH MORE THAN THE LIST

Never shop hungry. And fill the basket at the **meat, fish and dairy counters first** — what you buy first is what you eat.

READ THE LABEL, NOT THE PICTURE

Watch for *cerdo, jamón, chorizo, panceta, bacon, manteca de cerdo, gelatina*. Choose whey with a halal mark and no gelatin.

THREE CLASSES · WHENEVER THE STUDIO RUNS THEM

Your week

You don't have to pick the days. **Book whatever three slots your studio has** and build the week around them. There is only one preference, and it isn't a rule: if the timetable lets you, avoid two classes back to back. If it doesn't, go anyway — three classes badly spaced beats two well spaced.

Class days · × 3

10,000 STEPS

You're already out of the house, so these are your long-walk days too. **Breakfast is compulsory** and the 10:00 snack becomes the **protein drink** instead of the fruit.

Make at least two of the walks **hilly**. Madrid is built on slopes, and walking uphill is genuine glute work that costs you nothing extra. Stairs instead of the escalator, every single time — it's the cheapest leg training in the city.

Other days · × 4

6–8,000 STEPS

No training at all. Eat exactly the same as a class day — **rest days are when the muscle is actually built**, and eating less on them is how people undo their own work.

The one thing that still happens every day, without exception, is the walking. Steps aren't exercise; they're the background of the day.

WRITE YOUR SLOTS IN HERE ONCE YOU'VE BOOKED THEM

MON	TUE	WED	THU	FRI	SAT	SUN
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
STEPS	STEPS	STEPS	STEPS	STEPS	STEPS	STEPS

WHERE THE STEPS COME FROM

Off the metro one stop early, twice a day	+3,000
Walk the last stretch home from uni	+2,500
25-minute walk after dinner	+2,500
Phone calls standing and walking	+3,000
Food shop on foot, twice a week	+2,000

NEVER GO TO CLASS FASTED

Training on empty is exactly how you lose muscle instead of building it — there's no fuel and no amino acids available, so the body takes both from your legs. Protein within two hours after.

DON'T ADD ANYTHING ELSE

No running, no HIIT, no extra cardio. It eats the recovery your legs need to grow, raises your appetite sharply, and stresses a body that's been under-fuelled for a long time. The fat comes off through food. The shape comes from class and walking.

CLASS CANCELLED?

Nothing about the food changes. Add 2,000 steps and carry on. One missed class in sixteen weeks is noise.

THE PART THAT DECIDES THE SHAPE

Building glutes & legs

Weeks 1–4 • just go

NOTHING TO ASK, NOTHING TO CHANGE

Take the class exactly as it's run. Don't negotiate with the instructor, don't ask for a different format, don't worry about whether it's the "right" kind of Pilates. Your only job for the first month is **turning up three times a week and eating**. Everything below is available to you from day one, needs nobody's permission — and none of it matters if you're not in the room.

WHAT YOU CONTROL INSIDE ANY CLASS, WHOEVER IS TEACHING IT

You can't choose the exercises — you can choose how hard each one is, and that's what decides whether a class builds muscle or just makes you sweat.

- **Take the heavier spring.** When the instructor gives a range — "blue or red" — you take the heavier one, every time, unless your form breaks.
- **Three seconds coming back.** Slow the lowering phase of every repetition. It is free extra stimulus and nobody has to know you're doing it.
- **Take the harder version.** Whenever a variation is offered — single leg, arms overhead, no hands — take it.
- **Finish every leg set.** Long sets are where people quietly coast. The last three reps should be genuinely hard — shaking is the point, not a problem.
- **Full range, every rep.** Half a repetition builds half as much.
- **Never sit out the glute series.** Bridging and side-lying work look easy and change your shape most.

THE EXERCISES WORTH SPENDING YOURSELF ON WHEN THEY COME UP

You won't choose them, but you'll recognise them — and this is where the heavy spring and the last hard reps go.

- **Footwork on the reformer** — heels, toes, wide. Your main quad and glute lift.
- **Anything single-leg** — twice the load per leg, and it exposes the weaker side.
- **Pelvic curl and bridging** — the most direct glute work in the whole repertoire.
- **Feet in the straps** — hip extension, circles, frogs. Slow, and fight the return.
- **Side-lying leg series** — glute medius, the muscle that gives the shape from behind.
- **Lunges, squats and step-ups** on the reformer or chair.

FROM WEEK 5, IF YOU FEEL LIKE IT — AND ONLY IF YOU DO

One sentence to the instructor at the end of a class, nothing more: *"I'm trying to build strength in my legs and glutes — is there a heavier option for me?"* Most will happily adjust. If the studio runs a fixed format and the answer is no, that is completely fine — the spring you pick and the tempo you use are already doing the work.

ONE HONEST THING

Three classes a week, taken the way this page describes and backed by 130 g of protein a day, will build real glute and leg muscle — especially in your first year of training and while eating properly for the first time in ages. It isn't the fastest route that exists, but it's the one you'll actually do — so the three levers you *do* have, **the heavy spring, the protein and the hills**, are doing all of the work. None of them is optional.

TWO SUPPLEMENTS · FOUR HABITS · ONE HONEST PAGE

The rest of it

Whey protein

1-2 SCOOPS A DAY

Going from 40 g of protein a day to 130 g is a big jump, and food alone won't get you there while your appetite is still small. One scoop is 24 g in thirty seconds — it's powdered milk protein, that's all.

Half a scoop in breakfast, every day, plus one in the 10:00 shaker on Pilates days. Plain concentrate or isolate, halal mark, no gelatin — HSN, Prozis and MyProtein all deliver across Spain in a day or two. About €0.80 a day.

Vitamin D3

1,000-2,000 IU

You leave at 07:20 and you're indoors 08:00-12:00 — most of the useful daylight, especially October to March. Low vitamin D is common in students and shows up as exactly what you've described.

Take it with breakfast; any *farmacia* sells it and a year costs under €15. That's the complete list — fat burners, detox teas, slimming infusions, L-carnitine and CLA don't work, and some sold online aren't safe.

WATER · 2 L

500 ml the moment you wake, before coffee. Part of the 11 a.m. tiredness is simply that you haven't drunk anything since yesterday.

COFFEE

Two a day, both before 14:00, **never before food**. On an empty stomach it causes the queasiness that makes breakfast impossible.

SLEEP · 7.5 H

A 6:00 alarm means lights out at 22:30. Muscle is built and appetite hormones reset while you sleep. Phone across the room.

THE 3 P.M. CRASH

A fuel problem, not your personality. Gone within ten days of eating breakfast, a 10:00 snack and a real lunch — your first proof this works.

IRON — THE MOST LIKELY REASON YOU'RE TIRED

Low ferritin is the most common cause of exhaustion in a twenty-year-old woman, and months of eating almost no meat make it likely. Easy to fix — but only once it's been *measured*. **Never supplement iron on a guess; too much is harmful.**

What food does meanwhile: red meat, lamb, lentils, **always with lemon** — vitamin C roughly doubles how much iron you absorb. Still tired after four weeks of eating properly? Get the blood panel below.

YOUR CYCLE

- **The week before:** appetite up, mood down. Keep the protein, eat the extra carbs without guilt, *don't weigh yourself*. It passes in four days.
- **During:** you lose iron — red meat or lentils, always with lemon. Keep going to class unless you're in real pain.
- **Irregular or absent periods** mean long-term under-fuelling — eat *more*, and see a doctor.

SEE A DOCTOR IF — NOT OPTIONAL

- The fatigue hasn't clearly improved after **four weeks** of eating three real meals a day.
- Dizziness standing up, hair falling out, cold all the time, nails breaking, bruising easily.
- Periods that stop for three months or more.
- Heart racing at rest, or breathless on stairs you used to manage.
- Food starts to feel like anxiety rather than fuel — talk to someone early, it's common and treatable.
- **Ask for this panel:** ferritin, full blood count, vitamin D, B12, folate, TSH.

Guidance for a healthy twenty-year-old with no known conditions — not medical advice. If a doctor says otherwise, the doctor wins.

WHERE THIS GOES

The sixteen weeks

WEEKS	DAILY FOOD	PROTEIN	SCALE	WHAT'S ACTUALLY HAPPENING
1-2 The ramp	1,800 then 1,700	130 g	59 → 59	You're coming up from around 1,100 a day, so you step up over two weeks instead of all at once — that's what brings your energy back rather than bloating you. Success here is <i>fourteen days of three meals</i> . The scale is not the target and may not move at all.
3-6	1,600	130 g	59 → 57.9	The deficit starts. Energy clearly better than week 1. The 3 p.m. crash is gone. Springs start moving.
7-11	1,600	130 g	58 → 56.8	The steady middle. Waist drops faster than weight — that's muscle arriving as fat leaves. This is the stretch where people quit. Don't.
12-16	1,600	130 g	56.8 → 55.5	Glutes and legs visibly fuller. Don't cut further and don't add cardio — just keep doing exactly this.
17 + Hold	1,900	130 g	≈ 55.5	Food comes back up to maintenance. Protein and Pilates stay. This is how the result stays.

Your milestones — not one of them is a number on a scale

Day 3
MILESTONE**Three breakfasts in a row**

The hardest habit in this book, already done.

Date: _____

Week 6
MILESTONE**Heavier springs, waist down 2–3 cm**

Take photos next to week 1. This is the one that shocks you.

Date: _____

Week 2
MILESTONE**Fourteen days, no meal skipped**

Forty-two meals. Two weeks ago you managed one a day.

Date: _____

Week 10
MILESTONE**Clothes that didn't fit, fit**

Pick the item now and leave it where you'll see it.

Date: _____

Week 3
MILESTONE**The 3 p.m. crash is gone**

Proof that it was never laziness — it was fuel.

Date: _____

Week 16
THE FINISH**Five kilos of fat gone. Glutes built.**

Not shrunk — built. Then week 17 makes it permanent.

Date: _____

PRINT IT · ONE TICK A DAY · NOTHING ELSE TO LOG

WEEK 2	8	9	10	11	12	13	14
WEEK 3	15	16	17	18	19	20	21
WEEK 4	22	23	24	25	26	27	28
WEEK 5	29	30					

IF YOU MISS A DAY

Leave the circle blank and tick the next one. **Never start the chart over.** Twenty-seven out of thirty is a brilliant month — restarting from zero because of one bad Tuesday is how good months get thrown away over nothing.

SATURDAY MORNING, ONCE A WEEK

Same time, after the bathroom, before eating. **Weight, waist at the navel, hips.** Photos every two weeks. Only the four-week trend means anything.

THE 16-WEEK LOG

WEEK	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Weight																
Waist																
Hips																
Pilates																
Energy /10																

Thirty circles. That's the whole ask.

Not thirty perfect days — thirty days where you ate three times. Do that and everything else in this book starts working on its own.

ONE LAST PAGE

Read this on the bad days

"I SKIPPED A MEAL."

Eat the next one normally. That's the whole answer. Never eat less later to balance it — that's the exact loop that created this.

"I ATE WAY TOO MUCH."

Enjoy it, then back to normal at the next meal. One big meal cannot undo a week. Three days of under-eating afterwards absolutely can.

"THE SCALE WENT UP."

Salt, carbs, your period, training yesterday, or your muscles refilling with water. None of it is fat. Weigh again in three days.

"I'M STUCK AT THE SAME WEIGHT."

Check three things honestly: three meals, 130 g protein, the steps. Nine plateaus out of ten are one of those — and the fix is doing them, not eating less.

"I FEEL GUILTY EATING THIS MUCH."

At 59 kg and 1.60 m, 1,600–1,900 kcal is not overeating. It's what a healthy adult woman needs. The guilt is a habit from the under-eating, and it fades.

"I FELL OFF. IT'S BEEN A WEEK."

Then you restart at the *next meal* — not Monday, not next month. A week off doesn't undo six weeks on. Everyone falls off. The only thing that has ever mattered is how fast you restart.

Panda — you are not lazy and your body is not broken.

It has been running on far too little for far too long, and it did the only sensible thing a body can do: it turned everything down and started taking apart the muscle you weren't feeding. That's why you're tired. That's why the scale stopped. That's why you're losing exactly the tissue you wanted to keep. Three complaints, one cause — and the cause was never that you lack discipline.

There's no forbidden list in here. Bread, rice, pasta, potatoes, olive oil, merguez, dates and dark chocolate are all in the plan. There are no recipes either, because you don't need them — you cook better than most people ever will. **The only things missing were quantity and protein.**

The first two weeks will feel like nothing is happening. You'll be eating more than you have in a year, the scale might go *up*, and every old instinct will tell you to cut back. Don't. That is exactly the stretch where the work is being done underneath.

By week six you'll notice it in the smallest way: three o'clock will arrive and you just won't crash. By week sixteen you'll have lost more than five kilos of fat and put real muscle on your legs and glutes — **built, not shrunk.**

You've got this.

Start tomorrow morning. Yogurt, half a scoop of whey, oats, fruit, nuts.
Two minutes. That one bowl is the whole program starting.
